

RAIN

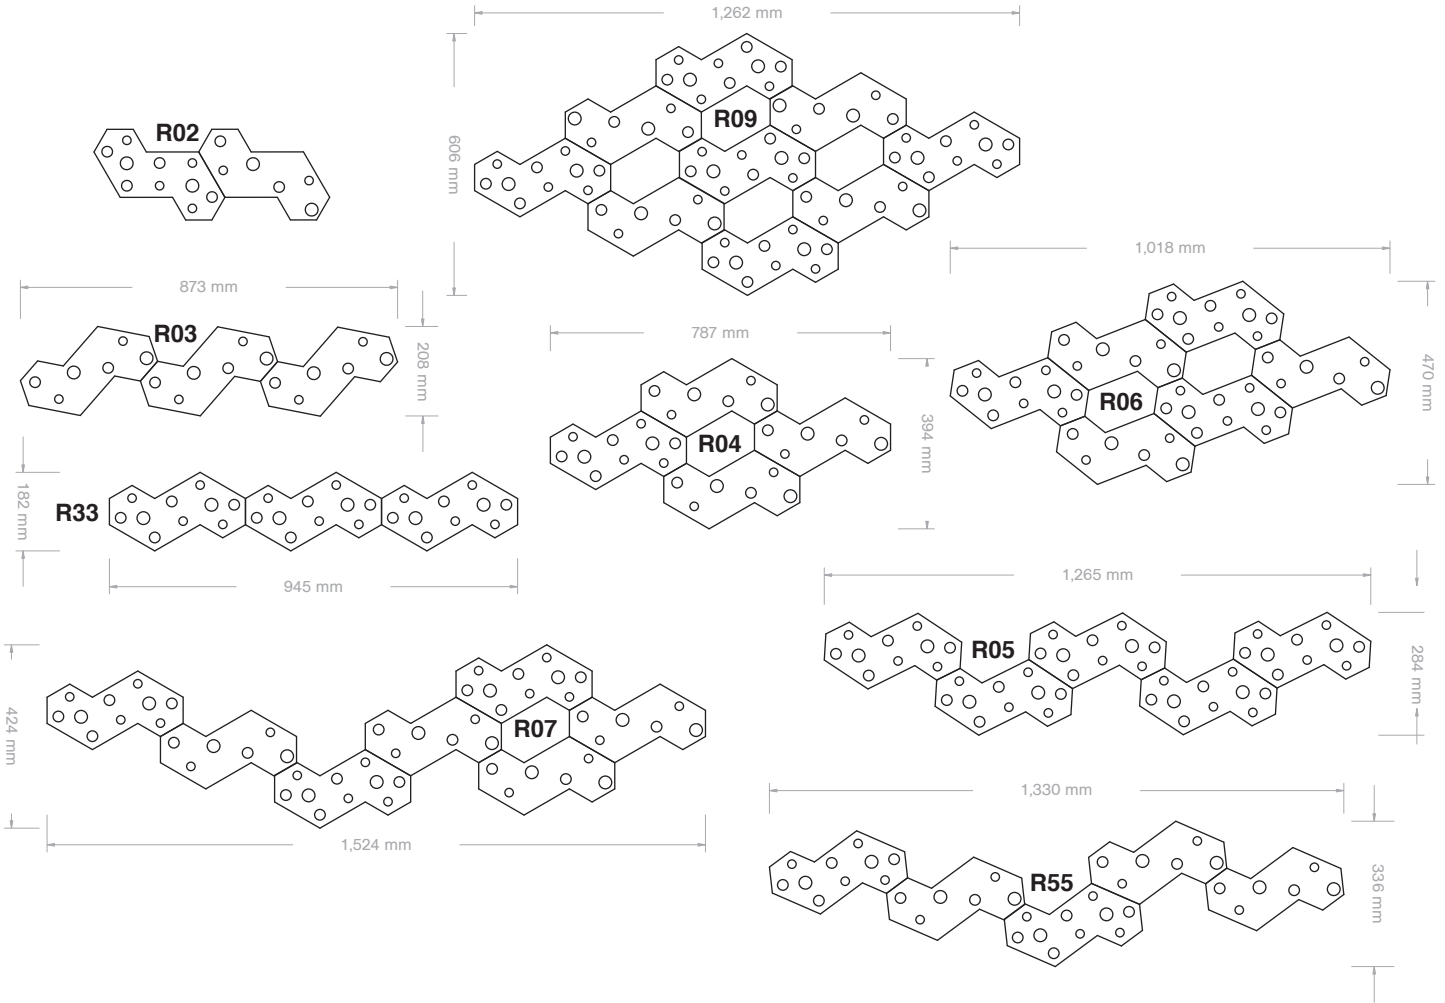

YEAR OF DESIGN:
2003

DESCRIPTION:
The concept behind Rain is illuminating: a multi-sensory experience of sight and sound that invites touch and interaction. Rain captures the shimmery sparkle of raindrops frozen in descent and voices a whimsy chime of flutes. Individual drops are visually quite subtle, but gain tremendous strength when multiplied and clustered in large groups. It is a playful piece with the sleekness of a design classic that is suitable for residential and commercial use.
